Sony Active Interior System

RHT-G1000*

Hong Kong, November 4, 2005 – Sony Active Interior System offers an innovative all-in-one solution for home theater entertainment by combining a stylishly designed TV stand with front speakers, an AV receiver and a subwoofer. The aesthetic and space-saving design of the system is developed to fit any living room décor and is sure to be a visual centerpiece inside any home.

Ideal for integration with Sony's BRAVIA LCD TVs and any DVD players for the ultimate experience in home theater entertainment, the Active Interior System combines the TV stand with all the necessary audio components and hides all messy wiring neatly. Customers can now arrange their home entertainment systems to directly reflect their aesthetic preferences and décor needs with even simpler set-up and more configuration flexibility without the hassle of wires.

“Inspired by the flat panel TV trend, the introduction of the Active Interior System is an innovative design concept for the next generation home A/V entertainment,” said Mr. Kunihiko Kawakita, Division Managing Director, Hong Kong Marketing Company, Sony Corporation of Hong Kong Limited. “Not only do customers want their home theatre configurations to aesthetically complement their home décor, they also want systems that will deliver unsurpassed performance with easy placement. The unique design addresses what consumers want - an easy to operate entertainment system that complements the aesthetics of their home.”

* The RHT-G1000 is one of the models of Active Interior System in smaller size.

The Active Interior System incorporates Sony's newly developed proprietary S-Force PRO Front Surround technology and S-Master digital amplifier to deliver up to 700W total system output. The marriage of these technologies ensures the sound processing and amplification occurs in the digital domain for the perfect sound reproduction. By this process, the S-Force PRO creates virtual surround sound effect by using precise DSP calculation thus creating the best possible sound field without the use of room reflections. The S-Force PRO Front Surround technology utilizes an all-digital process with no analogue conversion, keeping the signal purely digital from start to finish.

In addition to the S-Force PRO Front Surround technology, the system integrates advanced audio performance features such as S-Master digital amplifier, Dolby Digital/dts/Dolby Pro Logic II surround sound for impressive surround sound audio playback, delivering an astounding surround sound experience.
