Perfect Picture Deserves Perfect Sound: Sony Boosts Sound Bar Line-up

The new HT-NT5 and HT-CT790 are HDCP 2.2 compliant and support Wireless Surround and Wireless Multi-room with SongPal app

HT-NT5

Hong Kong, June 7, 2016 – Sony announced today two new Sound Bars, the HT-NT5 and HT-CT790, which allow customers to elevate their home audio experience to the next level with powerful performance and simplicity. These new Sound Bars are HDCP 2.2 compliant, supporting playback of copyright-protected 4K content, including hit blockbuster movies.

The new 2.1ch Sound Bar HT-NT5 with Wireless Subwoofer continues Sony’s lineup of premium sound technology with High-Resolution Audio playback, built-in support of 4K and High Dynamic Range content from major studios via HDMI HDCP 2.2, Spotify Connect, and Multi-room capability via the SongPal app.

Connected to your 4K TV, the HT-NT5 is the future-proofed gateway to an exciting world of content and services, from streaming video to the latest 4K Ultra HD Blu-ray Disc™ titles. HDMI 2.0 pass-through takes advantage of the latest 4K sound and picture standards and HDCP 2.2 side-steps problems playing 4K content with latest copy protection measures. HDR showcases the new wave of video content mastered with High Dynamic Range for eye-popping contrast and realism. Support for the 4K 60p 4:4:4 extended colour space brings extra excitement to your viewing with a richer, wider palette of tones you’ve only dreamed of until now.

New advanced technologies for wireless audio playback go beyond wireless multi-room — the ability to play music simultaneously on multiple connected devices, to the introduction of ‘Wireless Surround’ that provides a more powerful audio and video experience. ‘Wireless Surround’ enables a real surround sound environment by combining a sound bar as front speakers together with two wireless speakers as the rear speakers, enabling an immersive TV watching experience. Everything is controlled from your mobile or tablet with Sony’s easy-to-use SongPal app.

With Google Cast™¹ Technology built-in, you can cast music apps such as Google Play Music or Pandora straight from your mobile device or laptop to your speakers. Uniquely designed with six powerful speakers that sit upright, the new HT-NT5 delivers an immersive surround sound experience with the exceptional clarity of hi-res listening.

When you're relaxing in front of the TV, the HT-NT5 premium sound bar brings a very special presence to any living room. Echoing this year's 'Slice of Living' BRAVIA TV design concept, the low-profile aluminium chassis won't block your view of the screen. Cool, understated lines are matched with touch-panel operation and neat cable management that keeps connecting wires hidden discreetly within BRAVIA's matching stand.

HT-CT790

Also joining the Sound Bar family, the new 2.1 channel Sound Bar HT-CT790 with wireless subwoofer supports 4K and High Dynamic Range content from major studios via HDCP 2.2, Google Cast, Spotify Connect and Multi-room capability via the SongPal app. With multiple HDMI inputs, the HT-CT790 provides the best sound experience for multiple devices, aligning well with today's customers' digital entertainment expectations.

The HT-CT790 fills the room with an impressive 330W of peak power, assisted by Sony's unique S-Force PRO and a newly designed sound deflector which sits on top of the left and right speaker units to create a satisfyingly wide soundstage. Like the HT-NT5, it's compatible with Wireless Surround and Wireless Multi-room, letting you expand your system whenever you're ready using SongPal app.

Sony's new Sound Bars HT-NT5 and HT-CT790 will be available from mid-June 2016 at HK\$5,980 and HK\$3,480 (selling prices of Sony Store) respectively.

¹ Google Cast is a trademark of Google Inc.
